

Tracking a Flight with FsACARS

Here's how to begin tracking a flight with FsACARS:

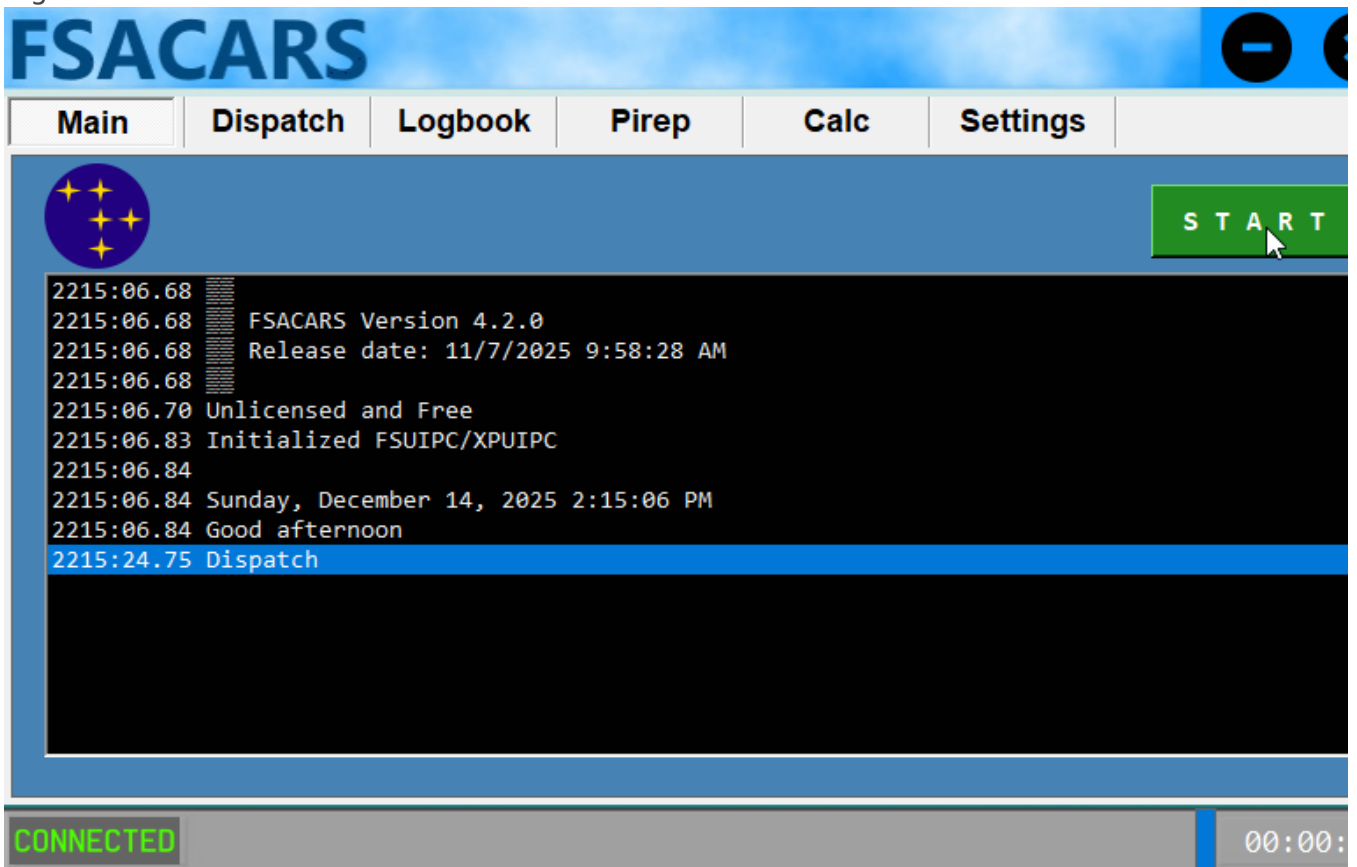

1. Dispatch your desired flight from the website, either as a charter, tour, event, or scheduled flight
2. Launch FsACARS and go to the **Dispatch** tab

The screenshot displays the FsACARS web interface. At the top, the 'FSACARS' logo is visible on the left, and navigation tabs for 'Main', 'Dispatch', 'Logbook', 'Pirep', 'Calc', and 'Settings' are in the center. The 'Dispatch' tab is selected. Below the tabs, the interface is split into two main sections. On the left, the 'Dispatch' panel contains input fields for 'ORIG', 'FNUM', and 'DEST', along with 'SET' and 'CLR' buttons. A large yellow box highlights a 'REQUEST' button at the bottom of this panel. On the right, the 'Live Flight Data' panel displays various flight parameters in a grid format, including Aircraft, Latitude, Longitude, IAS KT, TAS KT, GS KT, Wind, MSL, AGL, Hdg True, Hdg Mag, Fuel Used, Fuel On Board, Gross Weight, Distance NM, FPM, Pitch, Bank, and Surface Conditions. At the bottom of the interface, a status bar shows 'CONNECTED' in green text on the left and a timer '00:00:' on the right.

3. Click the **Request** button. This will load your most recently dispatched flight from the Canada Air Virtual website.

- Switch to the **Main** tab and click the **Start** button once you're ready to start tracking your flight.

- The **Main** or **Dispatch** tabs are excellent for monitoring your tracking status during your flight. The **Dispatch** screen, in particular, will show you live flight data. You should also start seeing your flight live on the Canada Air Virtual website, as well as in tools such as Little Nav Map.
