Flight Center Plugin

- Version 1.1.0
- Version 1.0.5
- Version 1.0.6
- Version 1.0.4

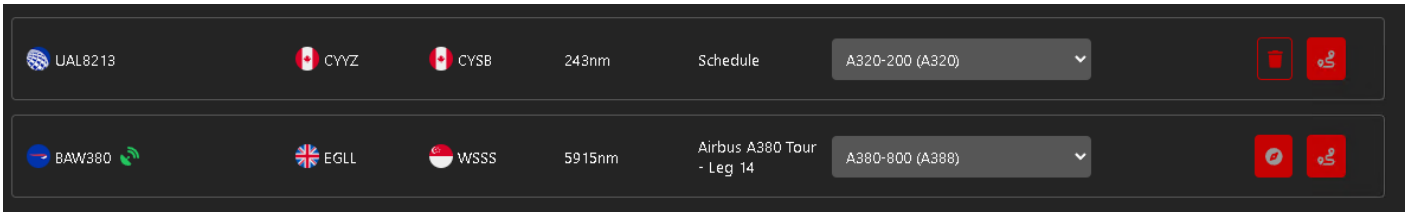

Version 1.1.0

This version ensures that even a live flight is still visible in the Flight Center. The aim of this is to help pilots realize that their dispatched flight is in fact there and has already been started by smartCARS 3.

A live flight is denoted with a green signal icon in the Flight Center.

Live flights cannot be deleted, so the instead of a delete icon, there is now an icon that takes the user to the Flight Tracking screen.

Version 1.0.5

- fix: update flight data handling to reflect new API response structure
- feat: enhance flight creation logic with aircraft matching and improved logging
- fix: remove unnecessary console logs from flight creation component

Version 1.0.6

Minor fix to ensure a flight imported via Simbrief without an airline icao will not result in a "[object] object" flight number.

Version 1.0.4

- Initial release
- Shows all currently dispatched flights for a pilot, mirroring the My Dispatches page on the website
- Supports searching and dispatching of
  - Schedules
    - All schedules searchable via a number of parameters
  - Tour Legs
    - Only legs eligible to be flown are searchable and can be dispatched
  - Events
    - All upcoming events are displayed, but only events that are active can be dispatched
  - Charters
    - Includes Simbrief import if the official Simbrief plugin is installed (optional but recommended)
