What if I forgot to start CAVacars 2?

If you're still on the ground, simply stop your aircraft and set the parking brake. Now start CAVacars 2 and connect it to your simulator: it finds your dispatched flight and starts tracking it while your aircraft isn't moving. Unfortunately, if you're already in flight, you'll need to restart your flight in order to track it with CAVacars 2.

See Flight tracking in the CAVacars 2 Pilot Guide.
